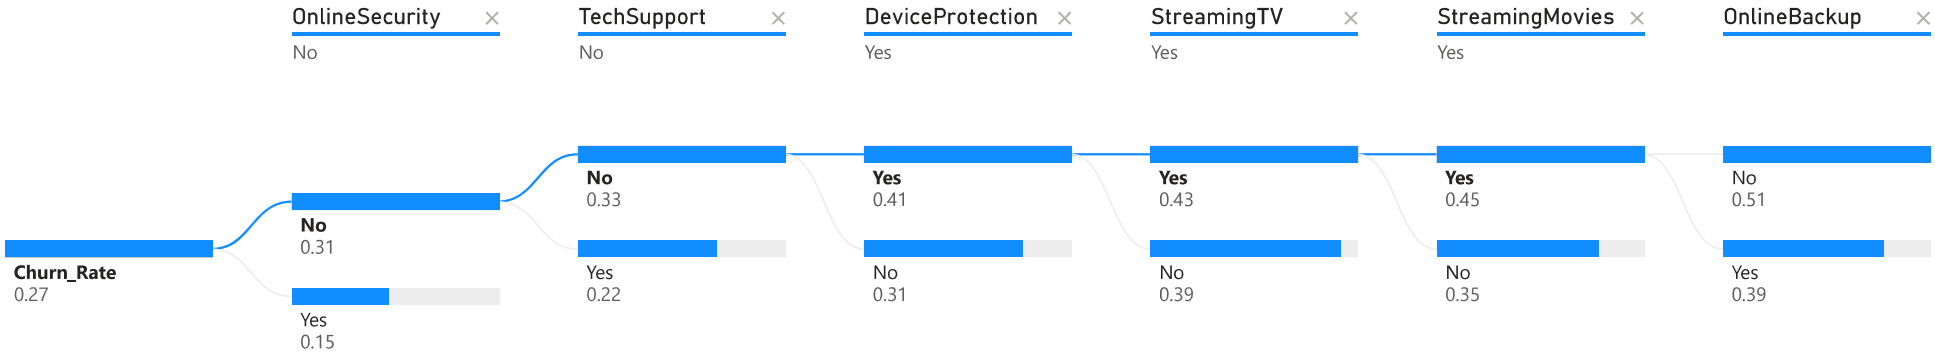
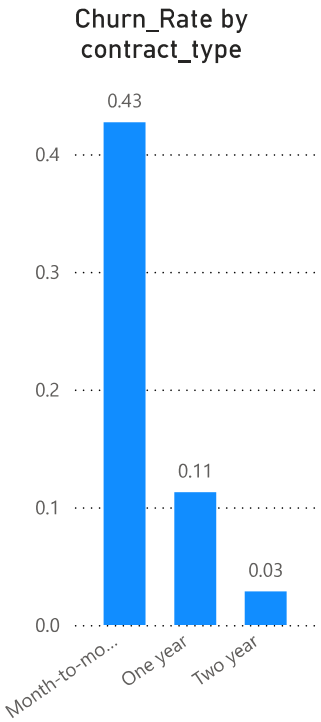
Customer Profile Insights

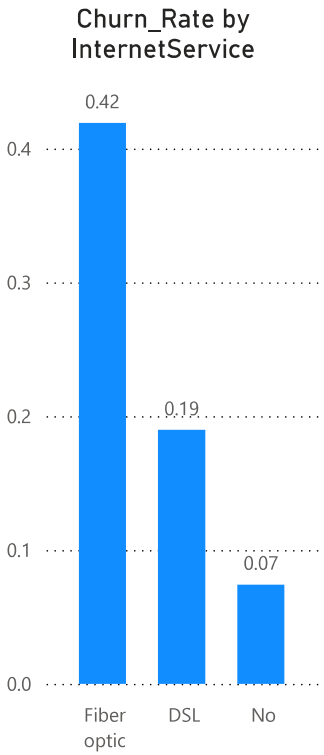
- New customers (0–6 months) churn at the highest rate.
- Senior citizens churn more than non-seniors.
- Customers without partners or dependents churn significantly more.
- Gender does not meaningfully affect churn.

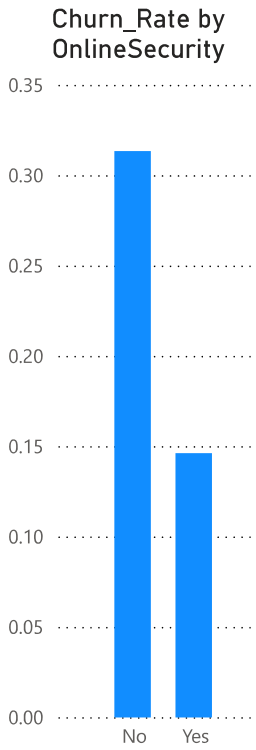
Conclusion:

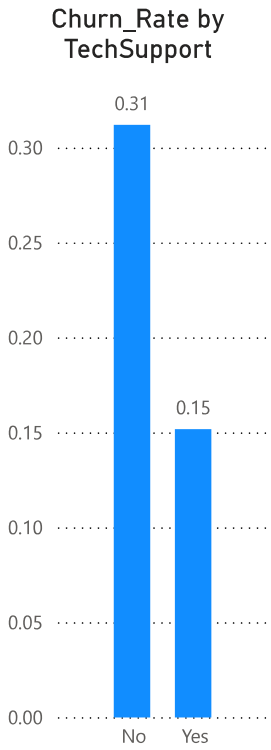
Churn is strongly linked to customer stability and tenure. Retention efforts should focus on new customers and customers living alone.

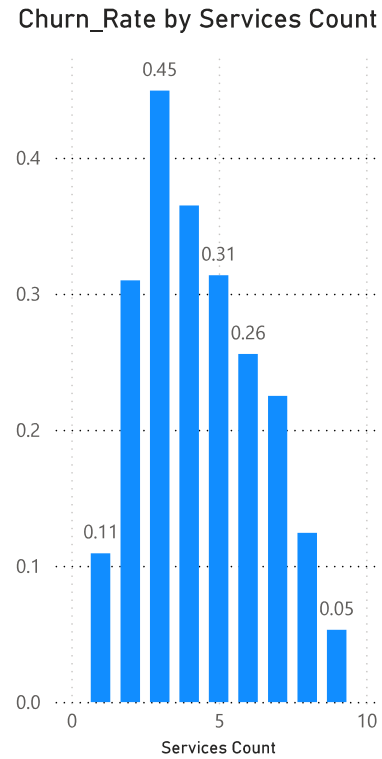












Service & Contract Insights

- Month-to-month contracts have the highest churn.
- Fiber optic customers churn more than DSL customers.
- Customers without security or tech support churn significantly more.
- Customers with more bundled services churn less.

Conclusion:

Contract type and service bundling are the strongest levers for reducing churn.

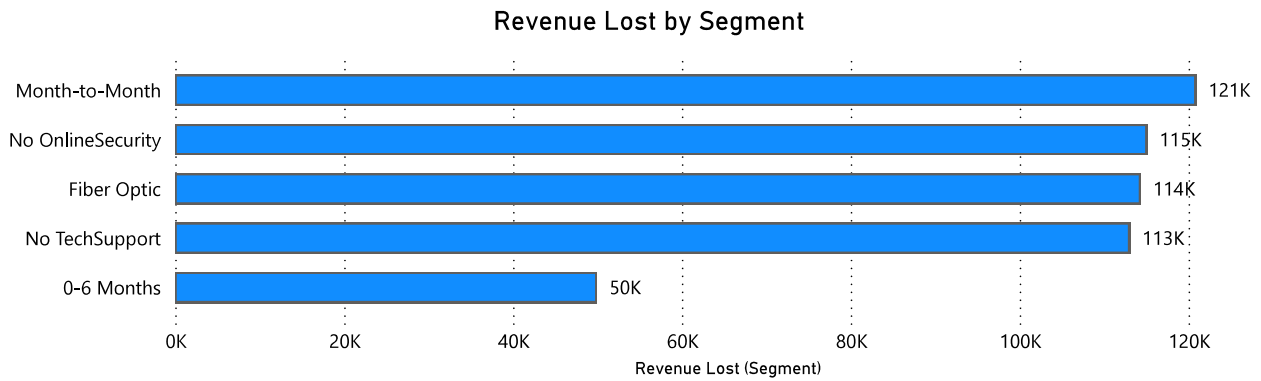
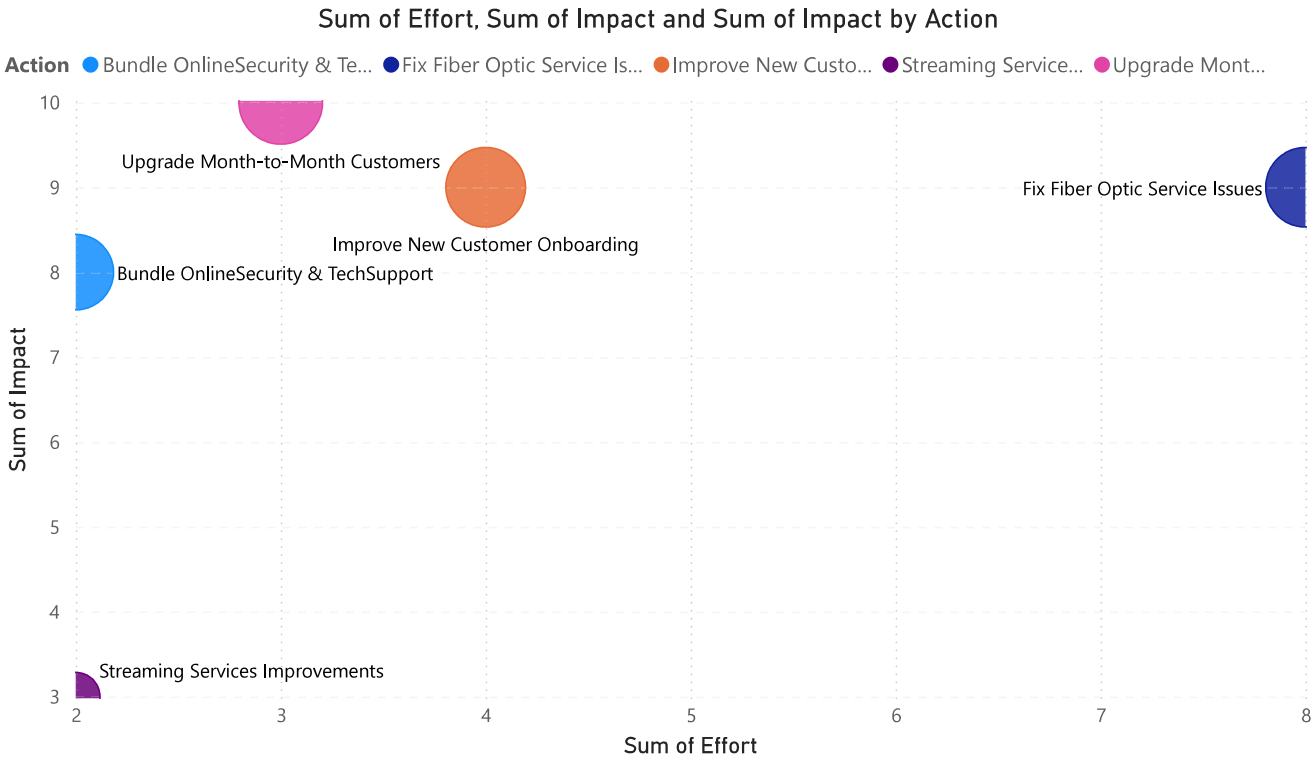
Financial Insights

- Churned customers represent a significant loss in monthly recurring revenue.
- Month-to-month customers drive the majority of revenue loss.
- Fiber optic customers contribute disproportionately to churn-related losses.
- New customers (0–6 months) generate the highest revenue loss due to early churn.

Conclusion:

Retention efforts should prioritize high-value customers, fiber optic users, and month-to-month subscribers to reduce financial leakage.





Recommended Actions

- **Target month-to-month customers** with discounts or loyalty offers to encourage contract upgrades.
- **Improve onboarding for new customers (0–6 months)** to reduce early churn.
- **Bundle OnlineSecurity and TechSupport** into promotional packages to increase stickiness.
- **Investigate fiber optic service issues —** high churn suggests dissatisfaction.
- **Prioritize high-value customers** (high LTV) for retention outreach.

Expected Impact:

Reducing churn by even **5%** in high-value segments can save **tens of thousands** in monthly revenue.
